Shown with HCI 13" BedMate Tablet TV

Secure and Versatile

The new Wall Mount Articulating Arm for Tablets and TVs installs securely and offers 360° articulating movement for optimal viewing. The Articulating Wall Mount offers smooth, silent operation with no exposed mounting screws or wires – hidden cable management is built right in. This tablet mount offers two VESA patterns, 75mm and 100mm, to fit the needs of your facility. It features fully cleanable surfaces to help with infection control and can be cleaned with any hospital-grade cleaners.

Engage and Teach

The flush-mounted plate for the articulating arm stays secure on the wall. Position the Wall Mount Arms at patient side walls or headwalls to allow video calls with [loved ones](#) or [telemedicine](#) visits where the patient is comfortable viewing and participating in the call on their bedside tablet. The Wall Mount Arm makes it easy for patients to control their bedside TV and access [educational content](#) or [self-service](#) options on [BedMate Tablet TVs](#). These sleek Wall Mount Arms make video calls and engagement on attached interactive tablets easy.

Ergonomic Patient-Forward Design

The Wall Mount Articulating Arm fits HCI 13" and 15" BedMate bedside Tablet TVs or other touch-enabled tablets. With a lighter weight and ergonomic halo/hand grip at the base of the tablet, patients can adjust the tablet and Arm to their preference for optimal viewing. The Arms stay put once positioned and there is no gradual, annoying "sink" of the Arm angle. Arm operation is easy for patients with movement challenges or weak hands or fingers.

The Articulating Arms in the product series feature silent motion, hidden cable management and there are no exposed mounting screws. The Arms work with HCI [Health-Key wireless keyboards](#) for even more options for an outstanding patient experience.
