

**FOR IMMEDIATE RELEASE**

**DAVID DAWOD JOINS HCI AS CHIEF TECHNOLOGY OFFICER**

Healthcare Technology Trailblazer Welcomes Skilled IT Professional to  
Lead Product Innovation

*Dawod Brings Technology Development Experience to  
Industry Leader in Interactive Patient Care*

**CINCINNATI, OHIO, February 16, 2021** — HCI is proud to announce and welcome David Dawod, MBA, as the company's new Chief Technology Officer. Mr. Dawod is responsible for managing engineering and R&D for HCI's groundbreaking interactive digital devices and software used in Acute, Long-Term, Rehabilitation and Palliative care sectors of the healthcare marketplace. He has been working with new technologies and specializing in multi-platform development and implementation for more than 10 years and comes to HCI with a background in Software Administration, including experience in Networking, Data Analysis and Design Technologies.

Mr. Dawod earned a Master's degree in business administration and management from Benedictine University.

"It's exciting to join HCI during a time of extraordinary growth for the company," Mr. Dawod said. "HCI interactive solutions are the future of the healthcare industry and I'm excited to bring in my skill set to lead their continued evolution and development. We have a superb Engineering and R&D team and together we'll drive new levels of interoperability and user experience for our clients." John Pratt, CEO of HCI, said, "David has a breadth of knowledge and leadership skills that support our aggressive product development goals to offer even more features to our clients and providers. We're happy to have him leading the team into the next decade of HCI's product innovation."

In addition to R&D and engineering, Mr. Dawod will be responsible for overseeing seamless client project implementations and designing the next iterations of HCI's enterprise applications, which include a path to a more cloud-agnostic approach in the product line.

## **ABOUT HCI**

HCI provides interactive patient care solutions for healthcare and long-term care providers via a connected suite of innovative touch-enabled digital whiteboards, digital displays, interactive tablets and in-room Patient televisions. Our solutions give providers the opportunity to streamline and optimize their workflows for better human and fiscal resource management. Our platform and products are designed to integrate across existing healthcare facility systems for maximum engagement and the best user experience. We leverage patient and staff data analytics for better care coordination at lower cost, ultimately benefiting providers, patients and communities.
